

BCPN Small Projects Health Research Grants recipients

Research Project	Competition Year	Principal applicant	Co-applicants
Using Proteomics to Elucidate the Mechanisms of Pathogenesis in Syphilis	2007	Caroline Cameron	
Specificity within the human NEDD4 E3 ubiquitin ligases	2007	Rob Ingham	
Proteomic analysis of protein aggregates induced by the ubiquitin proteasome system inhibition	2007	Thibault Mayor	Maria Brack, Constance Couture
Proteomic analysis of Leishmania secreted microvesicles	2007	Neil Reiner	Leonard Foster, J. Maxwell Silverman
Establishing MRM as a high throughput mass spectrometry based proteomics approach for protein biomarker discovery and validation	2008	Christoph Borchers	John Hill, Michael Kuzyk
Proteomics using Nanodiscs	2008	Franck Duong	Cathy Chan, Leonard Foster
Quantification of SNAP-25 protein isoforms in human psychiatric disease	2008	William Honer	Gregg Morin, Vilte Barakauskas, Annie Moradian
The immune proteome in ovarian cancer	2008	Julian Lum	Christoph Borchers, John Webb, Brad Nelson, Peter Watson
Identification of matrix metalloproteinase-8 and -12 substrates in lung inflammation using positional proteomics	2008	Chris Overall	Alain Doucet
Identification of host proteins targeted by Mycobacterium tuberculosis effectors linked to disruption of vacuolar protein sorting	2008	Neil Reiner	Emily Thi, Leonard Foster
Generation of antibodies for the selective capture and identification of serum biomarkers	2008	Joan Shellard	Suzanne Perry
